Description		Operating voltage (V.DC)	Capacitance range (μF)
Long-life	Useful of 4,000hours at 85°C	6.3 ~ 600	560 ~ 680,000
	Useful of 4,000hours at 105°C	25 ~ 500	680 ~ 330,000
	Useful of 8,000hours at 85°C	350 ~ 550	680 ~ 27,000
	Useful of 8,000hours at 105°C	350 ~ 500	680 ~ 27,000
	Useful of 20,000hours at 85°C	350 ~ 500	680 ~ 27,000
	Useful of 4,000hours at 85°C	350 ~ 500	820 ~ 27,000
	Useful of 4,000hours at 105°C	350 ~ 500	680 ~ 22,000
	Useful of 8,000hours at 85°C	350 ~ 500	820 ~ 27,000
	Useful of 8,000hours at 105°C	350 ~ 500	680 ~ 22,000
	Useful of 20,000hours at 85°C	350 ~ 500	680 ~ 22,000
Large-capacitance	Useful of 4,000hours at 85°C	400	14,000 ~ 38,000
	Useful of 4,000hours at 85°C	350 ~ 500	5,600 ~ 57,000
	Useful of 4,000hours at 85°C	400 ~ 500	7,500 ~ 33,000
	Useful of 4,000hours at 70°C	350 ~ 500	10,000 ~ 51,000
	Useful of 8,000hours at 85°C	350 ~ 450	9,000 ~ 45,000
	Useful of 8,000hours at 85°C	350 ~ 500	7,900 ~ 42,000
	Useful of 4,000hours at 85°C	16 ~ 500	68 ~ 33,000
	Useful of 4,000hours at 105°C	16 ~ 450	68 ~ 33,000
	Useful of 4,000 hours at 105°C	450	450 ~ 1,840
	Useful of 4,000hours at 105°C	200 ~ 550	82 ~ 2,200
Large-capacitance	Useful of 5,000 hours at 105°C	450	450 ~ 1,840
	Useful of 5,000hours at 105°C	200 ~ 550	82 ~ 2,700
	Useful of 8,000hours at 105°C	200 ~ 500	56 ~ 2,700
	Useful of 10,000hours at 105°C	400 ~ 500	82 ~ 680
	Useful of 15,000hours at 105°C	200 ~ 450	56 ~ 1,800
	Useful of 4,000hours at 105°C	400 ~ 500	120 ~ 1,200
	Useful of 5,000hours at 105°C	400, 450	180 ~ 1,500
	Useful of 5,000hours at 105°C	400, 450	150 ~ 680
	Useful of 4,000hours at 85°C	200 ~ 600	220 ~ 6,800
	Useful of 4,000hours at 105°C	200 ~ 450	390 ~ 5,600
Charge-Discharge	Useful of 5,000hours at 105°C	400, 450	82 ~ 680
	For flash application	330 ~ 450	320 ~ 3,800
	For flash application	330 ~ 450	300 ~ 3,100
Long-life	Useful of 2,000hours at 105°C	200 ~ 450	8.2 ~ 560
	Useful of 5,000hours at 105°C	200 ~ 450	8.2 ~ 560
Aluminum encased type	Standard product	900 ~ 1,500	70 ~ 2,300
Aluminum encased type	Large capacity	800, 900	230 ~ 3,800
Aluminum encased type	High-ripple current	600 ~ 2,200	90 ~ 5,000
Resin encased type	Standard product	700 ~ 1,100	7 ~ 100
Resin encased type	High resistance	700 ~ 1,100	6 ~ 70
Resin encased type	Wide range of rated voltage	450 ~ 1,200	1 ~ 80

1. Capacitance of capacitors

A capacitor is so designed that a dielectric is sandwiched between two electrodes as shown in Fig. 1. The capacitance (C) is expressed as:

$$C = \epsilon \frac{S}{d} \quad \epsilon = \epsilon_r \epsilon_o$$

ϵ_r : specific dielectric constant. ϵ_o : dielectric constant of vacuum ($8.85 \times 10^{-12} \text{F/m}$)
 d : distance between electrodes (m). S : electrode surface (m^2)

Fig1 Basic structure of capacitor

2. Ranges of capacitance and operating voltage of various capacitors

3. Characteristics of various capacitors

	Aluminum	Film	Tantalum	Niobium	Ceramic
Dielectric	Aluminum oxide (Al ₂ O ₃)	Polyester, polypropylene, etc.	Tantalum pentoxide (Ta ₂ O ₅)	Niobium pentoxide (Nb ₂ O ₅)	Based on barium titanate, etc.
Specific dielectric constant	8~10	2.1~3.1	27	41	1500~15000 (barium titanate)
Shape	Screw terminal type, Snap mount type, Radial type, chip type	Dip type (main power), For SMD. case type	Chip type (main power) Dip type	Chip type	Chip type (main power), dip type
Advantages	- Cheap - Small-size and large-capacity	- Good characteristics - Can be made for low- to high-voltage applications - High reliability	- Small and comparatively large capacitance - Semi-permanent service life	- Small and comparatively large capacitance - Semi-permanent service life	- Small-size (particularly multilayer types) - No polarity
Disadvantages	- Short service life in hot environment - Large capacitance tolerance - Polarity	Large outside dimensions	- To be used with some voltage leeway - Polarity	- To be used with some voltage leeway - Polarity	Great changes in capacitance due to changes in temperature and DC voltage

MINIMUM ORDER QUANTITY

*When placing an order:

When placing an order, please order a quantity equal to an integral multiple of the basic ordering unit of a specific product.

AIC tech, as a member of society, is reinforcing its CSR endeavors in order to play our part in realizing a sustainable society under the philosophy of harmonizing cooperate activities with the environmental protection.

We have the regular product line-up which is compliant with RoHS Directive (2011 / 65 / EU & 2015 / 863 / EU), such as Pb free, PVC free from molding materials.

Type		RoHS Status	RoHS Directive 10 restricted substances	PVC free	See page
			Pb, Hg, Cd Cr ⁶⁺ , PBB, PBDE, DEHP, BBP, DBP, DIBP

※ Regarding compliance for EU REACH Regulation

According to the content of “Guidance on requirements for substances in articles (published on May 2008)”, our electronic components are “articles without any intended release”. Therefore they are not applicable for “Registration” for European REACH Regulation Article 7 (1) .

※ The descriptions stated in above list are based on products information as of Nov. 2025.

Please contact us for more information about the current dealing items.

※ The product names stated in above are our major items only.

Please ask us for the specification data to confirm the contents and the characteristics in order to use the products safely and properly.

※ The descriptions stated in above list are subject to change without notice for the further improvement purpose.

1. STRUCTURE, CHARACTERISTICS AND FAILURES OF ALUMINUM ELECTROLYTIC CAPACITORS

1-1. Diagram of internal structure of aluminum electrolytic capacitors

Fig.1 Diagram of Internal Structure (Screw terminal type)

Fig.2 Diagram of Device and Basic Structure

1-2. Meanings of terms

① Working voltage (W.V.) and surge voltage (SV)

W.V. is the voltage that can be constantly applied while SV is the maximum voltage (450SV at 400W.V.) that can be withstood for a short period of time (30 seconds according to JIS C 5101-4).

② Permissible tolerance in electrostatic capacitance

The allowable range of dispersion in electrostatic capacitance. Aluminum corrodes the electrodes (etches), which increases the amount of surface area and causes the dispersions.

③ Equivalent Series Resistance

The Equalizer Series Resistance puts together electrical resistance of anode and cathode foils, electrolytic fluid resistance, and contact resistance of each connecting section.

④ Tangent of loss angle (generally called Tan delta ($\tan \delta$))

When current is placed on an ideal capacitor, the current moves ahead 90 degrees in phase from the voltage. However, because some loss occurs in the general capacitor, the forward angle of phase is $90^\circ - \delta$. The δ is called dielectric loss. $\tan \delta$ is obtained by the following formula.

$$\tan \delta = \omega CR$$

ω : $2\pi f$ [f = frequency (Hz)]

C : electrolytic capacitance (F)

R : Equivalent Series Resistance (Ω)

⑤ Impedance [Z]

$$\text{Resistance in an AC circuit } |Z| = \sqrt{R^2 + \left(\omega L - \frac{1}{\omega C}\right)^2}$$

R : Equivalent Series Resistance (Ω)

C : electrolytic capacitance (F)

L : inductance (H)

ω : $2\pi f$ [f = frequency (Hz)]

⑥ Leakage current (generally called LC)

DC current will not flow in an ideal capacitor after it has been completely charged with DC Current But, in the real, dielectric resistance is not infinite and a micro-current will flow through the capacitor. Electrolytic capacitors in particular can be damaged during processing by oxide film and when that is recovered the micro-current will flow.

1-3. Manufacturing processes for aluminum electrolytic capacitors

① Etching (expanding surface area)

The processing for expanding the surface of aluminum foil.

High purity aluminum foil, 500mm wide and 0.1mm thick is continuously processed electrochemically by flowing direct current through a chlorine bath solution. The surface area is expanded 50- 100 times for low-voltage use capacitors and 10-40 times for medium to high-voltage use capacitors.

Fig.3 Diagram of etching model

② Forming (dielectric formation)

The process of forming the dielectric (Al_2O_3).

The dielectric is formed in a continuous electrochemical process by passing a voltage that is 120-200 percent of the working voltage through etched aluminum foil that is in a bath of boric acid ammonium. The dielectric is extremely thin, about $14\text{\AA}/\text{V}$.

Fig.4 Diagram of formation model

③ Slitting

The formed aluminum foil (anode foil), cathode foil and electrolytic paper are slit according to the product size.

④ Winding

Electrolytic paper is inserted between the slit anode foil and the opposite cathode foil and rolled into a tube. Leads are connected because both electrode foils are concerted to a terminal. To prevent mechanical contact between the anode and cathode electrode foils, the electrolytic pass functions to hold the electrolytic liquid which is a cathode electrode.

⑤ Impregnation

The process of inserting the electrolytic liquid into the device by pressurization and depressurization.

The electrolytic fluid is uses such things for solvents as boric acid and organic acid ammonium with ethylene glycol as the main medium. These have a very big effect on the life, frequency characteristics, range of operating temperature and temperature characteristics of the capacitor.

⑥ Assembly

After making holes on lead tab insulation cap are connected to lead.

⑦ Sealing

The impregnated device is sealed by an aluminum case and sealant to keep it airtight.

⑧ Reforming (aging)

This is the process of applying voltage at high temperature to debug, to form the dielectric that has been damaged during assembly and to shear the anode foil during slitting.

⑨ Inspection of all parts

Inspection is made of the external appearance and the electrical characteristics of all aged parts.

⑩ Sampling, packaging and shipping

An inspection is made according to fixed sampling standards and the capacitors that pass the inspection are packed and shipped. Detailed tests are made periodically to check quality.

1-4. FTA map of failures

2. NOTES TO USERS OF ALUMINUM ELECTROLYTIC CAPACITORS

2-1. Operating environment

- (1) Water, saltwater, oil or other electrically conductive liquid on a capacitor, or using a capacitor when it is damp with dew may cause a failure. Oil on the rubber seal or safety vent may cause a decline in airtightness. Do not use any capacitor in contact with liquid. Do not use capacitors that have been immersed in rainwater or other contaminated water.
- (2) Do not use or leave a capacitor in areas where there is halide compound gas such as hydrogen sulfide, nitrous acid, sulfurous acid, chlorine and bromine, or ammonia or other hazardous gas. The ingress of any of these gases into a capacitor may corrode it.
- (3) Do not use or leave a capacitor in an area exposed to ozone, ultraviolet light, or radiation.
- (4) Powders (dust, etc.) that settle between terminals can absorb moisture and cause corrosion and tracking of the terminal. When there is conspicuous dust between terminals, stop the current, allow the capacitor to discharge, and wipe the terminals with paper or a towel lightly dampened with water or ethanol. Do not use cleaning agents or other chemicals.
- (5) Do not use a capacitor in an area subject to excessive vibration or impact.

2-2. Operating conditions

① Operating temperature, ripple current

- (1) Check the operating and installation environment and use the capacitor within the range of the rated performance specified in the catalog or specifications.
- (2) Maintain operating temperature and ripple current within the specified ranges. Base your choice of capacitors on the maximum load conditions. A capacitor will overheat under excessive current, potentially resulting in short circuit, fire, or other major failure.
- (3) A capacitor also generates the self heating. Please bear in mind that the capacitor heats up the interior of the equipment, and take appropriate precautions. Operate the unit under normal conditions and check the temperature of the area surrounding the capacitor.
- (4) The permissible ripple current declines with the rise in ambient temperature (the temperature of the capacitor's surroundings). Consider the permissible ripple current at the maximum predictable ambient temperature.
- (5) Electric characteristics change as frequencies change. Check frequency changes in order to choose the right capacitor. Special attention needs to be given to the self heating and short life time both low and high frequency, when equivalent series resistance and inductance change.

② Applied voltage and other operating conditions

- (1) In general, capacitors have polarity. Applying reverse voltage or AC voltage to a capacitor may activate the vent or cause a short circuit, fire or other major failure.
- (2) Use a bipolar capacitor for circuits whose polarity reverses. However, as in any other case, do not use a bipolar

- capacitor in an AC circuit. Use a special AC capacitor for AC voltage.
- (3) Do not apply voltage in excess of the rated voltage. When an AC voltage is superimposed on DC voltage, prevent the peak value from exceeding the rated voltage. Excessive voltage may cause a short circuit, fire, or other major failure.
 - (4) Specifications on surge voltage have restricted conditions and therefore do not guarantee long hours of operation. Voltage should never exceed the rated voltage of the capacitor, even for brief periods. Choose your capacitor accordingly.
 - (5) When connecting more than one capacitor in parallel, give proper consideration to the resistance of the wiring. Establish the connections so that the wiring resistance will be equal at every capacitor.
 - (6) When connecting more than one capacitor in series, all must be of identical rating, then the balancing resistors connected in parallel. At that time, design the circuit so that equal voltage levels are applied to all the capacitors. Ascertain that the voltage applied to each individual capacitor does not exceed its rated voltage.
 - (7) Take into account the service life of the equipment in the use of the capacitor. Use of the capacitor beyond its service life risks such failures as safety vent activation or short circuit. Replace as necessary at regular inspection.
 - (8) Do not use a capacitor for a circuit that is quickly charged and discharged repeatedly. Use a dedicated capacitor for an application like a welding unit or photo flash charging/discharging. Consult us for selecting the proper capacitor, since the control circuits of certain rotation equipment, like servo motors, charge and discharge repeatedly.
 - (9) Even slow charging/discharging can shorten the service life of a capacitor, resulting in premature failure, where there are marked changes in voltage changes. Check the installation in your equipment carefully and consult us.
 - (10) General purpose capacitors should not be used for a circuit involving rapid charge and discharge or an AC circuit. Capacitors specially made for such applications should be used. → Check the self heating of the capacitor used in such a circuit in addition to the types and levels to be imposed to the capacitor of the rapid charge/discharge, rush current and voltage.
 - (11) The circuits described as examples in this catalog and the "delivery specifications" are featured in order to show the operations and usage of our products, however, this fact does not guarantee that the circuits are available to function in your equipment systems. We are not in any case responsible for any failures or damage caused by the use of information contained herein. You should examine our products, of which the characteristics are described in the "delivery specifications" and other documents, and determine whether or not our products suit your requirements according to the specifications of your equipment systems. Therefore, you bear final responsibility regarding the use of our products. Please make sure that you take appropriate safety measures such as use of redundant design and malfunction prevention measures in order to prevent fatal accidents and/or fires in the event any of our products malfunction.

2-3. Installation

2-3-1. Before installation

- (1) Check the specifications of the capacitors, and install them within the prescribed specifications.
- (2) Do not reverse the polarity. Do not use a capacitor where reverse voltage is applied, even if it appears problem-free. Not taking these precautions could lead to a major failure.
- (3) Dropping or otherwise impacting a capacitor may result in a decline in its electric performance, causing a failure. Do not use any capacitor whose packaging has a noticeable abnormality on delivery.
- (4) Do not distort the shape of the capacitor, which may lead the major failures such as liquid leakage or short circuit.
- (5) Do not reuse a capacitor that has previously been installed on a machine and energized. No capacitor can be reused (with the exception of removal for measuring electrical performance during periodic checkups).

2-3-2. Installation method

- (1) Do not install wiring or a circuit pattern near the vent. When the vent is activated, electrolyte may spurt out, resulting in short circuit followed by fire or other secondary hazard due to tracking or migration.
- (2) Do not lay out heat-generating components near the capacitor. Radiated heat and other partially high temperatures may shorten the life of the capacitor. PCB temperature that is higher than the internal temperature of the capacitor markedly hinders the dissipation of heat inside the capacitor, greatly shortening its life. When designing equipment, check temperature distribution first.
- (3) When installing the vent of the capacitor against the PCB, drill a gas bleeder hole to allow the gas to escape when the vent is activated. If the diffusion of gas is hindered while the vent is in operation, the internal pressure can rise, with danger of explosion, fire or other serious failure.

① Snap mount type capacitors, Radial type capacitors

- (1) When fixing with the snap mount type capacitors had two claw terminal and the length of the capacitor more than 55 mm to PCB, use adhesive glue.
- (2) Do not connect the blank terminal (reinforced terminal) of multi-terminal (3-, 4-) snap mount capacitors, as this could cause a short circuit.
- (3) Use a completely isolated circuit between the case and the electrode terminal, and between the case and the circuit pattern.
- (4) Do not hinder the activation of the vent. Allow for the following clearance above the vent. If dissipation of gas is inhibited while the vent is in operation, the inner pressure will rise, with danger of explosion, fire or other major failure.

Capacitor diameter	Clearance
ϕ 10 ~ 16	2mm or more
ϕ 18 ~ 35	3mm or more
ϕ 40 or more	5mm or more

- (5) Exterior sleeves are for labeling purposes, not for insulation. Consult us if you need insulation.
- (6) Failure to tightly solder the capacitor to the PCB may result in one of its terminals breaking or its pattern peeling off due to vibration. Insert the capacitor snugly and correctly into the designated holes in the PCB, then solder it.
- (7) Terminal pitch and dimensions for the terminals are specified for a capacitor. → Check whether the terminal pitch and the mounting holes on the board match properly. The electrolyte leaks from inside if mismatched.
- (8) Solder at 260°C for not more than 10 seconds (In the case of dip) or at 380°C for not more than 3 seconds (In the case of tip of iron). Exceeding these specifications may result in a decline in electrical performance, leading to trouble. Do not let the tip of the soldering iron come in contact with the capacitor body.
- (9) If it becomes necessary to remove a capacitor after soldering, melt the solder with a soldering iron to avoid subjecting the terminals to stress.
- (10) Flux on the rubber seal may result in corrosion. Do not let flux stick to any part other than the terminals.
- (11) Some cutting oils contribute to swelling of rubber, with the risk of corrosion and a decline in air-tightness. If the rubber surface will be exposed to cutting oils, use washable capacitors.
- (12) Do not twist or otherwise physically move the capacitor after soldering it to the PCB. Do not take hold of the capacitor to move a PCB either, as this may deform the terminal or decrease its air tightness.
- (13) Do not apply physical impact to the capacitor (striking, etc.) after it is soldered to a PCB. When stacking PCBs, make sure that the capacitors don't contact PCBs or other components.

② Screw-terminal type capacitors

- (1) Don't turn cap face to downward. If a capacitor is installed sideways, please put anode terminal or vent upward.
- (2) Recommended tightening torque and terminal permissible current (maximum current a terminal can withstand) for each terminal screw are listed below. Consult us if you wish to use a capacitor on a machine that vibrates significantly.

Terminal	Recommended torque(permissible level) (N.m)	Terminal permissible current (A)
M 5	2.2 (1.5 ~ 3.0)	60
M 6	3.5 (3.0 ~ 4.0)	100
M 8	7.5 (7.0 ~ 8.0)	120

- (3) Refer to page 22 for recommended clamping value of the bracket.
- (4) The terminal screws (M5 standard under head: 10mm, M6 standard under head : 12mm, M8 standard under head : 16mm) in the separate package are designed for wire thickness not exceeding 2mm. Add to the screw length for wires more than 2mm thick. Heat generated due to a small screw clamping area could cause a failure.
- (5) If a screw is loose or angled, that portion generates heat, with a danger of fire or other serious failure. Check that the screw is inserted on the perpendicular and securely tightened.
- (6) Recommended a bar hole diameter for M5, M6, M8 terminals are listed below. An excessively large hole diameter may result in poor contact between the terminal surface and the bar, causing local heat buildup, with a danger of fire or other serious failure.

Terminal	A bar hole diameter
M5	ϕ 5.5
M6	ϕ 6.6
M8	ϕ 9

- (7) Do not apply physical stress (tightening with fixtures, etc.) to the curled portion (seal contacting the case and cap). Any such practice may cause a liquid leak or sleeve breakage.

2-4. About washing PCB and fixative

- (1) In washing, please avoid using a material which destroy the ozone layer.
- (2) For cleaning flux, we recommend an aqueous or higher alcohol detergent or isopropyl alcohol. The recommended concentration of flux with regard to the cleaning agent is 2wt% or less. Excessively high flux concentration may cause corrosion due to halide. For use of other cleaning agents, consult us.
- (3) If you must clean the capacitor with halogen solvents, etc., we recommend that you use washable capacitors. Make sure that the cleaning conditions are within those stipulated in the specifications, and measure the cleaning agent for conductivity, pH, specific gravity and moisture content for contamination control. After cleaning, thoroughly dry the capacitors together with PCBs. Do not store the capacitors in the same atmosphere as the cleaning agent or in a sealed container. For details on washable capacitors, consult us.
- (4) Thoroughly remove all traces of the cleaning agent from the capacitor. Even when not cleaning the flux, dry the flux itself. Cleaning agent or flux residue may cause the halide to penetrate the rubber seal, leading to corrosion.
- (5) When fixing a PCB and capacitor with a coating agent or fixative, use a substance completely free of halide compounds. Thoroughly dry the flux or detergent before applying the coating. Do not let the coating block the entire surface of the seal. Any halide compound present in the coating may lead to corrosion.

2-5. Storage

- (1) Store all capacitors indoors at a temperature of 5-35°C and relative humidity of not more than 75%RH (25°C), away from direct sunlight. Store capacitors in their original packaging whenever possible.
- (2) The maximum shelf life of capacitors is 3 years. The maximum shelf life of capacitors for snap mount capacitors is 2 years using leadless soldered terminals, beyond which solderability deteriorates.
- (3) All capacitors which have been on the shelf for more than 2 years have an excessively high leakage current. Treat them with appropriate voltage before using. As treating method, it is used current density less than specified leakage current in room temperature.
 - Firstly, 80% of rated voltage applied and keep 1 hour after reaching 80% of rated voltages.
 - Secondarily, 90% of rated voltage applied and keep 1 hour after reaching 90% of rated voltages.
 - Finally, 100% of rated voltage applied and keep 1 hour after reaching 100% of rated voltages.
- (4) Even after discharged, capacitors may hold an electrical charge due to re-striking. Do not touch the terminals with bare hands. Touching the terminals could cause an electric shock. Discharge all capacitors with a resistor (approx. 1kΩ) or a discharge plate before use.

2-6. About fumigation

- (1) To control insects during export, fumigation may be done using halide compounds such as methyl bromide. Direct fumigation of capacitors or equipment incorporating capacitors or use of fumigated timber as a pallet may cause corrosion inside a capacitor, resulting in failure. Even when covered in plastic, chemicals may penetrate through small gaps. Likewise, do not apply insecticides directly on or near the capacitors.
- (2) When using a sterilizer against infectious diseases, do not spray it directly on or close to capacitors and equipment incorporating capacitors. Some sterilizers contain a high concentration of halide compounds. The sterilizer spray may accelerate internal corrosion, resulting in failure.

2-7. Miscellaneous

2-7-1. Maintenance and servicing

- (1) Conduct periodic checkups on capacitors for industrial equipment. Before each periodic checkup, turn off the equipment and completely discharge the capacitor.
following these checkpoints:
 - ① Appearance: Condition of the vent (open, notably swollen), liquid leaks or other considerable abnormality
 - ② Electrical performance: Capacity, tangent of loss angle, leakage current, and other items specified in the delivery specifications.

The standard temperature for measuring electrical performance is 20°C. Leave the capacitor at 20°C and wait for the inside of the capacitor to reach the specified temperature before taking measurements.
- (2) Please ask us the advisability of using capacitor which is inspected.
- (3) Replace all capacitors whose service life has reached its end. When replacing one capacitor, always replace all of them. Mixing old and new capacitors may cause an imbalance in the ripple current or voltage sharing, risking failures such as activation of the vent or short circuit.

2-7-2. In an emergency

- (1) If gas is detected while a product is in use, turn off the main power supply or unplug it.

- (2) When the safety vent of a capacitor is activated, a hot gas exceeding 100°C will escape. Do not place your face in close proximity to the vent and avoid proximity to areas exposed to the gas.
- (3) Should the gas jet get in your eyes, wash them immediately with clean water. If you inhale the gas, gargle immediately. The gas is composed of a gaseous form of hydrogen or organic solvents.
- (4) Should the electrolyte come in contact with your skin, wash with soap and water. Never put it into your mouth.

2-7-3. For scrapping

- (1) Scrapped capacitors are classified as scrapped metal. For burial they are handled as controllable industrial waste because of the nature of the contents (electrolyte). Commission an industrial waste disposal specialist for their disposal. Ensure that no waste products enter the market.
- (2) Most of the material is aluminum and cannot be completely burned. In incineration, take the following into consideration:
 - Burning the capacitors in an airtight state may cause an explosion. Before incinerating, either pierce the exterior or break them open. Be sure to wear protective clothing during this operation, since electrolyte or gas will jet out if the inner pressure of the capacitor is high.
 - Because of the exterior material (polyvinyl chloride), low-temperature incineration may emit hazardous gases. Burn the material at high temperatures (800°C or above). Incineration requires separation of the exterior materials.
- (3) Do not attempt to crush the capacitors, as this may cause electric shock or injury.

2-7-4. Remarks

For details, see the Guidelines on the Operation of Fixed Aluminum Electrolytic Capacitors for Electronic Equipment EIAJ RCR-2367B March, 2002 issue.

3. Service Life of an Aluminum Electrolytic Capacitor

3-1. Factors affecting service life

Environmental factors affecting the service life of an aluminum electrolytic capacitor include temperature, humidity and vibration (environment), as well as electrical factors, applied voltage, ripple current and charging/discharging conditions. In capacitors for mid-to-high-voltage filters, temperature and applied voltage are the most important controlling factors. The estimated service life may be calculated based on the core temperature of the capacitor and the applied voltage.

3-1-1. Temperature conditions

Capacitance change or tangent change for loss angle indicates that the product life has been affected by temperature. Generally, as the ambient temperature (neighboring temperature of the capacitor) increases, capacitance decreases and tangent change for loss angle takes place more rapidly. This is mainly because electrolytic solution generates gas due to electrode reaction and diffuses it outside via a sealing rubber. The following expression (1) indicates the relation between the ambient temperature and electric characteristic that changes with time (while the capacitor is used normally according to the rules of serviceability).

$$L = L_0 \times 2^{\frac{T_0 - T}{10}} \quad \dots (1)$$

Where,

L : Estimated service life in actual use

L₀ : Standard service life when allowable ripple current load or rated voltage is applied at the maximum operating temperature

T₀ : Maximum core temperature setting when subjected to the maximum allowable ripple load at the maximum operating temperature (settings differ in different series or products. Contact us for details)

T : Core temperature of the capacitor during actual use

Therefore, the lower the core temperature of the capacitor during actual use, the longer the estimated service life is. The core temperature of a capacitor may be lowered by lowering either the ambient temperature or the load current (operating conditions), or by either boosting capacitance or lowering internal resistance. Some capacitors feature a radiating structure to lower the core temperature. Consult us for the selection of capacitors.

When multiple capacitors are connected in parallel, check the core temperature in each capacitors and the

balance of the total series resistance to each capacitors. If capacitors are used at high frequency, the circuit resistance is especially need to considered. The estimating service life is needed to calculated from the maximum core temperature.

3-1-2. Voltage conditions

The service life of an aluminum electrolytic capacitor for mid- to high-voltage filters is affected by the applied voltage. If the applied voltage is between 60% and 100% of the rated voltage, the estimated service can be extended by lowering the applied voltage below the rated voltage. However, if the applied voltage is less than 60% of the rated voltage or the capacitor is used in low-pressure (100 WV or less) applications, the impact of the applied voltage on the service life is negligible. Therefore, service life is estimated assuming no impact from voltage. Continuous application of a voltage over the rated voltage rapidly increases leakage current in a capacitor. This may increase internal pressure due to generation of gases, resulting in activation of the safety vent in a short time and/or formation of an internal short circuit.

For this reason, the applied voltage must be maintained below the rated voltage during use. Besides, it should be noted that the circuit design is such that the applied voltage will remain 80% or less of the rated voltage during use.

Where more than one capacitor connected in series is used, the applied voltages across the individual capacitors may become out of balance, resulting in the application of excessive voltage to them. To avoid this, either choose a rated voltage allowing for voltage imbalances, or connect a voltage divider (resistors) to the capacitors. Please be careful about charge/discharge.

3-2. Formula for estimating service life

- (1) Estimating from the core temperature of the capacitor and applied voltage Formula for calculating the service life of our capacitors in mid-to-high voltage applications (filters).

$$L = L_0 \times 2^{\frac{T_0 - T}{10}} \times \left(\frac{WV}{V} \right)^{2.5} \quad \dots (2)$$

Where,

T_0 : Maximum core temperature setting when subjected to the maximum allowable ripple load at the maximum operating temperature

L_0 : Standard service life when core temperature is T_0 and rated voltage is (WV)

L : Estimated service life when core temperature is T and applied voltage is (V)

If $V/WV < 0.6$, use $V/WV = 0.6$.

- (2) Estimating core temperature of a capacitor from load ripple current

We recommend that you estimate service life by measuring the core temperature of the capacitor with a thermocouple. We can manufacture samples with inserted thermocouples according to customer requests.

If for some reason it is impossible to measure the core temperature, you can estimate the service life by making a rough estimate of the core temperature of the capacitor from the load ripple current. As shown below, assuming the rise in temperature and the square of load current to be nearly proportionate, obtain the core temperature of the capacitor that occurs when the capacitor is loaded with a ripple current.

$$T = T_a + \Delta T_0 \times \left(\frac{I}{I_R} \right)^2 \quad \dots (3)$$

Where,

T : Core temperature of the capacitor when ripple current I is loaded

T_a : Ambient temperature

ΔT_0 : Rise in maximum core temperature setting for the capacitor when permissible ripple current I_R is loaded

(settings differ in different series or products. Contact us for details)

Note : Observe the rule: $I \leq I_R$. Never use a capacitor loaded with a ripple current greater than I_R .

For safety reasons, estimate the service life on the basis of the core temperature of the capacitor at maximum load. Temperature distribution should be taken into account when more than one capacitor is used.

3-3. Other factors affecting service life

(1) Reverse voltage

When a reverse voltage is applied to the capacitor, the capacitor's cathode foil that is not coated with oxide is energized, resulting in forced formation of an oxide film on its surface. During the process of forced formation, heat and gases are generated. This will shorten the service life significantly.

(2) Charge and discharge

Generally, where aluminum electrolytic capacitors are used in a charge/discharge circuit, oxide films are gradually formed on the surfaces of their cathode foils due to discharge current. This will shorten the service life significantly. For this reason, general-purpose capacitors are not suitable for circuits in which frequent charge and discharge are common. Examples include circuits for photo flash and welding.

(3) Inrush current

Upon switching on the power supply of a welding machine, a large current flows instantaneously at the beginning of charging. Such a current, called an inrush current, is 10 to 1,000 times as large as the normal value. Inrush currents pose no problem as long as they occur with very low frequency during operation. The reason for this is that their heat-generating energy is relatively small. However, if an inrush current occurs repeatedly during operation, it may shorten the service life significantly.

4. Reducing Substances with Environmental Impact

As part of our initiatives for global environment protection under ISO 14001, we recommend products without any substances with environmental impact to our customers.

(1) Lead-free

Regarding Snap mount type and Radial type Aluminum Electrolytic Capacitors, our standard specification is to use Tin instead of Lead on the surface of terminal plating. We discontinued producing Tin + Lead plating.

Regarding Screw terminal type Aluminum Electrolytic Capacitors, they do not contain Lead at all.

Please contact us for details.

(2) Eliminating Chromate Treatment

The previous chromate treatment on the surface of bracket contained hexavalent chromium.

To avoid this material, we changed to trivalent chromium.

The surface treatment is changed but no change in size or other specification.

In addition to Lead-free, aluminum electrolytic capacitors that we produce have suited RoHS Directive.

(3) PVC-free

For PVC-free Snap mount type and Radial type Aluminum Electrolytic Capacitors, the capacitors are covered with PET insulating sleeve, and The bottoms not covered.

Please contact us for other PVC-free products.

(4) Conform RoHS

All series (Screw terminal type Aluminum Electrolytic Capacitors, Snap mount type Aluminum Electrolytic Capacitors, Radial type Aluminum Electrolytic Capacitors) apply RoHS.

■ HOW TO ORDER

The first two digits are significant.
The last digit indicates the number of following zeros.

SCREW TERMINAL TYPE ALUMINUM ELECTROLYTIC CAPACITORS

Assembling method

Bracket(1) is used as the standard.

(Except the external deter of case of $\phi 51 \sim 101$, the Y-type bracket is used as the standard.)

(1) Bracket

I type

Type of bracket code : I

Available dia : Case dia size $\phi 36 \sim 90$

ϕD (mm)	a (mm)	b (mm)	θ (°)	W1 (mm)	W2 (mm)
36	6.0	3.5	45	48.0	58.0
51	6.0	4.5	45	68.0	80.0
64	6.0	4.5	45	81.0	93.0
77	6.0	4.5	45	93.5	106.0
90	7.0	5.0	30	108.0	120.5

Clamping value of the bracket

ϕD (mm)	Screw size	Recommended torque (permissible) (N · m)
36	M3	0.5 (0.5 ~ 0.6)
51 ~ 90	M4	1.3 (1.0 ~ 1.6)

Y type

Type of bracket code : Y

Available dia : Case dia size $\phi 51 \sim 101$

ϕD (mm)	a (mm)	b (mm)	W1 (mm)	W2 (mm)
51	4.5	7	63.5	73.0
64	4.5	7	76.2	85.1
77	4.5	7	88.9	98.4
90	4.5	7	101.6	111.1
101	5.5	8	115.0	127.0

Clamping value of the bracket

ϕD (mm)	Screw size	Recommended torque (permissible) (N · m)
51 ~ 90	M4	1.3 (1.0 ~ 1.6)
101	M5	1.8 (1.5 ~ 2.0)

X type

Type of bracket code : X

Available dia : Case dia size $\phi 121$

Clamping value of the bracket

ϕD (mm)	Screw size	Recommended torque (permissible) (N · m)
121	M5	1.8 (1.5 ~ 2.0)

(2) Stud screw type

B type

Type of bracket code : B

Available dia : Case dia size $\phi 51 \sim 101$

Recommended torque of stud screw

Screw size	Recommended torque (permissible) (N · m)
M12	15

(3) Insulation holder

Best suited for improving insulation and vibration resistance and for cutting back on assembly costs.
Please contact us if this holder is used so that a special aluminum case is necessary.

NEW!

Option Service:Water Cooling

Features

- By cooling the bottom of capacitor, it can be used with a higher ripple current.

Water Cooling option available series

Type of series	VF	VFR	VFL	VFLR	VFH	VFHR	VG	VGR	VGL	VGLR
Temperature range	-40~+85°C						-40~+105°C			
Useful life	4,000h		8,000h		20,000h		4,000h		8,000h	
Reference page	P.26	P.50	P.38	P.58	P.46	P.66	P.32	P.54	P.42	P.62

*Available dia is $\phi 77,90$

Product code

To figure this option, add "WC" at the end of the product name.
Please refer to the Reference page of Water Cooling option available series.

Standard products table

Please refer to the Reference page of Water Cooling option available series.

Water Cooling correction coefficient

Aspect ratio*	1.10	1.25	1.40	1.55	1.70	2.00	2.50	3.00
Correction coefficient	2.0	1.9	1.7	1.6	1.5	1.4	1.2	1.1

*Aspect ratio: Product height/dia

Notis

- Please select and apply a coefficient from the table above that exceeds the aspect ratio of the target capacitor.
Example: For a case size of $\phi 77 \times 108L$ $108/77 = 1.402...$
➡ From the table above, apply an aspect ratio of 1.55 and a correction factor of 1.6
- The heatsink and thermal pad are to be provided by the customer.
- Always use a thermal pad (Recommend; $\geq 1.8W/m \cdot K$, Thickness 1.0mm or less) when attaching to a heatsink.
- The bottom of the capacitor must be sufficiently covered by the thermal pad.
- The T-C withstand voltage depends on the specifications (withstand voltage and dimensions) of the thermal pad used.
- If the bottom of the capacitor is not sufficiently covered by the thermal pad, please pay attention to the withstand voltage.
- Please keep ambient cooling water temperature below 85°C.
- Please refer to the Reference page of Water Cooling option available series for the ripple current correction coefficient.
- For the temperature correction coefficient, apply the higher temperature out of the ambient temperature and cooling water temperature.

SCREW TERMINAL TYPE ALUMINUM ELECTROLYTIC CAPACITORS

UPGRADE!

VF Series

Useful of 4,000 hours at 85°C

Standard

- Conform RoHS

Features

- Ripple current increased by 10% by new heat radiation construction with HCGF6A series.

HCG7A

HCGF5A

HCGF6A

High-ripple current

VF

Obsoleted series

Product Specifications

Items	Specifications
Temperature range	-40 ~ +85°C
Rated voltage	6.3 ~ 600V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μ A) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μ F), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value mesured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature correction coefficient

Temperature(°C)	60	85
Correction coefficient		
6.3 ~ 100V.DC	2.19	1.00
160 ~ 250V.DC	2.02	1.00
350 ~ 600V.DC	1.67	1.00

Frequency · Forced wind correction coefficient

Frequency(Hz)	120	300	1K	≥ 10K
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind(m/s)	< 0.5	0.5 ≤		
Correction coefficient	1.0	1.1		

(unit : mm)

φD	P	T	φd	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin
64	28.6	8.0	11.0	M5×10	Phenol resin
77	31.5	8.0	11.0	M5×10	Phenol resin
90	31.5	7.0	11.0	M5×10	Phenol resin

Product code

(Example) VF Series 400 V 15,000 μ F ±20%

VF	2G	153	Y	F	167
Type of series	Case height code	Case dia code	Type of bracket code	Capacitance code	Rated voltage code

Terminal permissible current is limited to 60Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms) Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

Life time graph

Useful life depending on ambient temperature T_a and ripple current
operating conditions I versus rated ripple current at 85°C, 120Hz

VG Series

Useful of 4,000 hours at 105°C

Standard

- Conform RoHS

Features

- Ripple current increased by 50% by new heat radiation construction with HCGHA series.

Product Specifications

Items	Specifications
Temperature range	-40 ~ +105°C
Rated voltage	25 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 5mA, whichever is smaller or less (20°C, after 5minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature correction coefficient

Temperature(°C)	60	85	105
Correction coefficient	3.60	1.80	1.00
	2.16	2.00	1.00

Frequency · Forced wind correction coefficient

Frequency(Hz)	120	300	1K	≥ 10K
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind(m/s)	< 0.5	0.5 ≤		
Correction coefficient	1.0	1.1		

(unit : mm)

φ D	P	T	φ d	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5 × 10	Phenol resin
64	28.6	8.0	11.0	M5 × 10	Phenol resin
77	31.5	8.0	11.0	M5 × 10	Phenol resin
90	31.5	7.0	11.0	M5 × 10	Phenol resin

Terminal permissible current is limited to 60Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

Product code

(Example) VG Series 400V 15,000 μF ±20%

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz

SCREW TERMINAL TYPE ALUMINUM ELECTROLYTIC CAPACITORS

UPGRADE!

VFL Series

Useful of 8,000 hours at 85°C

Standard

• Conform RoHS

Features

- About 10% ripple current has improved to FX2 series by radiation structure.

FXA

FX2

FX3

→ High-ripple current

VFL

Obsoleted series

Product Specifications

Items	Specifications
Temperature range	−40 ~ +85°C
Rated voltage	350 ~ 550V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 5,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

● φ64 ~ 90

Ripple current correction coefficient

Temperature (°C)	60	85		
Correction coefficient	1.67	1.00		
Frequency (Hz)	120	300	1K	≥10K
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind (m/s)	< 0.5	0.5 ≤		
Correction coefficient	1.0	1.1		

(unit : mm)

φ D	P	T	φ d	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin
64	28.6	8.0	11.0	M5×10	Phenol resin
77	31.5	8.0	11.0	M5×10	Phenol resin
90	31.5	7.0	11.0	M5×10	Phenol resin

Terminal permissible current is limited to 60Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

ALUMINUM ELECTROLYTIC CAPACITORS

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I versus rated ripple current at 85°C, 120Hz

SCREW TERMINAL TYPE ALUMINUM ELECTROLYTIC CAPACITORS

UPGRADE!

VGL Series

Useful of 8,000 hours at 105°C

Standard

• Conform RoHS

Features

- About 10% ripple current has improved to GX2 series by radiation structure.

GXA

GX2

GX3

→ High-ripple current

VGL

Obsoleted series

Product Specifications

Items	Specifications
Temperature range	-40 ~ +105°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 5,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

● φ51

● φ64 ~ 90

Ripple current correction coefficient

Temperature (°C)	60	85	105	
Correction coefficient	2.16	2.00	1.00	
Frequency (Hz)	120	300	1K	≥10K
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind (m/s)	<0.5	0.5≤		
Correction coefficient	1.0	1.1		

(unit : mm)

φ D	P	T	φ d	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin
64	28.6	8.0	11.0	M5×10	Phenol resin
77	31.5	8.0	11.0	M5×10	Phenol resin
90	31.5	7.0	11.0	M5×10	Phenol resin

Terminal permissible current is limited to 60Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

VFH

Product Specifications

Items	Specifications
Temperature range	−40 ~ +85°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 20,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	60	85		
Correction coefficient	2.16	1.00		
Frequency (Hz)	120	300	1k	≥10k
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind (m/s)	<0.5	0.5≤		
Correction coefficient	1.0	1.1		

(unit : mm)

φ D	P	T	φ d	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin
64	28.6	8.0	11.0	M5×10	Phenol resin
77	31.5	8.0	11.0	M5×10	Phenol resin
90	31.5	7.0	11.0	M5×10	Phenol resin

Terminal permissible current is limited to 60Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	40	60	85
Correction coefficient	1.89	1.67	1.00
Frequency (Hz)	120	300	1k
Correction coefficient	1.0	1.1	1.3
Forced wind (m/s)	<0.5	0.5≤	
Correction coefficient	1.0	1.1	

φD	P	T	φd	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating condition I versus rated ripple current at 85℃, 120Hz

UPGRADE!

VGR Series Useful of 4,000 hours at 105°C

- Conform RoHS

Features

- The permissible ripple current is improved to VG series by approx.60% using low ESR material.

Product Specifications

Items	Specifications
Temperature range	-40 ~ +105°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	40	60	85	105

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating condition I versus rated ripple current at 105°C, 120Hz

UPGRADE!

VFLR Series Useful of 8,000 hours at 85°C

• Conform RoHS

Features

- The permissible ripple current is improved to FXR type by approx.10 ~ 20% using the new heat radiation, low ESR and the new anode foil.

FXR3

High-ripple current

VFLR

Obsoleted series

Product Specifications

Items	Specifications
Temperature range	-40 ~ +85°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (µA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 5,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

● φ51

● φ64 ~ 90

Ripple current correction coefficient

Temperature (°C)	40	60	85	
Correction coefficient	1.89	1.67	1.00	
Frequency (Hz)	120	300	1k	≥10k
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind (m/s)	<0.5	0.5≤		
Correction coefficient	1.0	1.1		

(unit : mm)

φD	P	T	φd	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin
64	28.6	8.0	11.0	M5×10	Phenol resin
77	31.5	9.0	12.0	M6×12	Phenol resin
90	31.5	8.0	12.0	M6×12	Phenol resin

Terminal permissible current is limited to 60Arms for M5, 100Arms for M6. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms for M5, 100Arms for M6)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 85℃, 120Hz

UPGRADE!

VGLR Series

Useful of 8,000 hours at 105°C

• Conform RoHS

Features

- The permissible ripple current is improved to GXR type by approx. 20~40% using the new heat radiation, low ESR and the new anode foil.

GXR3

→ High-ripple current

VGLR

Obsoleted series

Product Specifications

Items	Specifications
Temperature range	-40 ~ +105°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (µA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 5,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 105℃, 120Hz

UPGRADE!

VFHR Series Useful of 20,000 hours at 85°C

- Conform RoHS

Features

- High-reliability series with the warranty of 20,000 hours realized through improvement of the VFLR series into longer-life series.

VFH

P.46 High-ripple current

VFHR

Product Specifications

Items	Specifications
Temperature range	−40 ~ +85°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 20,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	40	60	85
Correction coefficient	1.90	1.75	1.00
Frequency (Hz)	120	300	1k
Correction coefficient	1.0	1.1	1.3
Forced wind (m/s)	<0.5	0.5≤	
Correction coefficient	1.0	1.1	

(unit : mm)

φD	P	T	φd	Hexagon-head bolt	Cap material
51	22.0	4.5	—	M5×10	Phenol resin
64	28.6	8.0	11.0	M5×10	Phenol resin
77	31.5	9.0	12.0	M6×12	Phenol resin
90	31.5	8.0	12.0	M6×12	Phenol resin

Terminal permissible current is limited to 60Arms for M5, 100Arms for M6. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms for M5, 100Arms for M6)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

Product Specifications

Items	Specifications
Temperature range	-10 ~ +85°C
Rated voltage	400V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (µA) or 7mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard products table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

(unit : mm)

φ D	P	T	φ d	Hexagon-head bolt	Cap material
77	31.5	9.0	12.0	M6×12	Phenol resin
90	31.5	8.0	12.0	M6×12	Phenol resin

Ripple current correction coefficient

Temperature (°C)	40	60	70	85
Correction coefficient	2.2	1.9	1.6	1.0
Frequency (Hz)	120	300	1k	≥10k
Correction coefficient	1.0	1.1	1.3	1.4

Terminal permissible current is limited to 100Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 100Arms) Please consult us when the ripple voltage exceeds 50 Vp-p.

ALUMINUM ELECTROLYTIC CAPACITORS

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating condition I versus rated ripple current at 85°C , 120Hz

HCGWA Series

Useful of 4,000 hours at 85°C

- Conform RoHS

Features

- Product primarily designed for circuits requiring large energy momentarily like those for the uninterruptible power supply (UPS) and X-ray power supply.
- Capacitance improved by 40%, comparison with the HCGF6A series (smallest series)
- The correspondence size has been expanded to $\phi 121 \times 283L$.

Product Specifications

Items	Specifications
Temperature range	-10 ~ +85°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μA) or 7mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard products table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

(unit : mm)

φ D	P	T	φ d	Hexagon-head bolt	Cap material
77	31.5	5.0	10.0	M5×10	Phenol resin
90	31.5	5.0	10.0	M5×10	Phenol resin
101	31.5	3.0	14.0	M6×12	Phenol resin
121	41.5	3.0	14.0	M6×12	Phenol resin

Ripple current correction coefficient

Temperature (°C)	40	60	70	85
Correction coefficient	2.2	1.9	1.6	1.0
Frequency (Hz)	120	300	1k	≥10k
Correction coefficient	1.0	1.1	1.3	1.4

Terminal permissible current is limited to 60Arms for M5, 100Arms for M6. (Even if calculated the permissible ripple current with the correction coefficient exceeds 60Arms for M5, 100Arms for M6)
Please consult us when the ripple voltage exceeds 50 Vp-p.

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- $\phi 121$ products become correspondence only of Type X.
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

ALUMINUM ELECTROLYTIC CAPACITORS

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I_r versus rated ripple current at 70°C, 120Hz

FXW Series

Useful of 8,000 hours at 85°C

- Conform RoHS

Features

- Capacitance has been increased by 35% compared with FX2 series by special etched foil technology and new structure of element.
- High reliability series with the warranty of 5,000 hours realized through improvement of the HCGWA series into a longer-life type.

ALUMINUM ELECTROLYTIC CAPACITORS

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 85℃, 120Hz

FXW2 Series

Useful of 8,000 hours at 85°C

- Conform RoHS

Features

- Capacitance is increased by around 30%, from conventional FXW series through development of etched foil technology.
- The correspondence size has been expanded to $\phi 90 \times 268\text{L}$.

FXW2

Product Specifications

Items	Specifications
Temperature range	-10 ~ +85°C
Rated voltage	350 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (µA) or 7mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard products table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 5,000 hours: Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

(unit : mm)

φD	P	T	φd	Hexagon-head bolt	Cap material
77	31.5	9.0	12.0	M6×12	Phenol resin
90	31.5	8.0	12.0	M6×12	Phenol resin

Ripple current correction coefficient

Temperature (°C)	40	60	70	85
Correction coefficient	2.2	1.9	1.6	1.0
Frequency (Hz)	120	300	1k	≥10k
Correction coefficient	1.0	1.1	1.3	1.4

Terminal permissible current is limited to 100Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 100Arms) Please consult us when the ripple voltage exceeds 50 Vp-p.

(Example) FXW2 Series 400V 18,000 µF ±20%

FXW2 2G 183 Y F 150

Type of series
Case height code
Case dia code
Type of bracket code
Capacitance code
Rated voltage code

Refer to page 21 for product code.

Bracket

- Refer to page 22-23 for shapes and dimensions.
- Product names in the Standard Products Table correspond to the bracket for Type Y, but Type I bracket may be used (Type of bracket code = I).
- If bracket are not necessary, enter "N" for the type of bracket code.
- Bracket will be delivered separately.

ALUMINUM ELECTROLYTIC CAPACITORS

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating condition I versus rated ripple current at 85°C, 120Hz

Option Service: Charge-Discharge

- Conform RoHS

Features

- Suited to high frequency Charge-Discharge for AC servomotor, general inverter.
- To our regular series, we add Charge-Discharge function.
The size / performance is as it is.

Product Specifications

Items	Specifications
Rated voltage	400, 450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (μ A) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μ F), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	Please refer to the Reference page of Charge-Discharge available series.
Endurance of high temperature load behavior	After an application of specified ripple current on top of rated voltage for Warranty life at the maximum operating temperature, following requirements must be met. Capacitance change : Within $\pm 15\%$ of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Endurance of charge-discharge behavior	After an application of charge-discharge voltage for 100 million times (charge-discharge (ΔV) = 150V, cycle 3 or 2 Hz ^(*)) at 40°C, following requirements must be met. Capacitance change : Within $\pm 15\%$ of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

*1 Charge-Discharge frequency:

The highest Charge-Discharge frequency is 2Hz as for the products of 10,000 μ F or more, all other products are 3Hz.

Charge-Discharge option available series

Type of series	VF	VFL	VFH	VG	VGL
Temperature range	-40~+85°C			-40~+105°C	
Useful life	4,000h	8,000h	20,000h	4,000h	8,000h
Reference page	P.26	P.38	P.46	P.32	P.42

• Product code

To figure this option, add “DH” at the end of the product name.

Please refer to the Reference page of Charge-Discharge option available series.

• Standard Products Table

Please refer to the Reference page of Charge-Discharge option available series.

• Ripple current correction coefficient

Please refer to the Reference page of Charge-Discharge option available series.

HOW TO ORDER

OUTLINE OF DRAWINGS AND DIMENSIONS

• PS2 and US2 series use resin insulation cap. Please refer to page of each series for dimensions.

2-claw short terminal

Standard terminal

Terminal code : C

Case dia (D) : $\phi 20 \sim \phi 35$

Case height (L) : $\sim 75L$

(When fixing with the snap mount type capacitors had two claw terminal and the length of the capacitor more than 55 mm to PCB, use adhesive glue.)

(Unit : mm)

2-claw terminal

Terminal code : R

Case dia (D) : $\phi 20 \sim \phi 35$

Case height (L) : $\sim 75L$

(When fixing with the snap mount type capacitors had two claw terminal and the length of the capacitor more than 55 mm to PCB, use adhesive glue.)

(Unit : mm)

4-claw terminal

Terminal code : S

Case dia (D) : $\phi 35 \sim \phi 40$

(Unit : mm)

BLANK terminals must be connected insulated hole.

4-claw short terminal

Terminal code : X

Case dia (D) : $\phi 35 \sim \phi 40$

(Unit : mm)

BLANK terminals must be connected insulated hole.

■ T-type terminal (φ 30 ~ φ 40)

Terminal code : T

Case dia (D) : φ 30 ~ φ 40

■ T-type terminal (φ 51)

Terminal code : T

Case dia (D) : φ 51

■ 3-claw short terminal

Terminal code : E

Case dia (D) : φ 22 ~ φ 35

UPGRADE!

HP3 Series Useful of 4,000 hours at 85°C

• Conform RoHS

Features

• The HP3 series is the standard products of 85°C .

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 85°C, 120Hz

HU3 Series Useful of 4,000 hours at 105°C

• Conform RoHS

Features

• The HU3 series is the standard products.

Product Specifications

Items	Specifications
Temperature range	−40 ~ +105°C
Rated voltage	16 ~ 450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (µA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)		60	70	85	105	
Correction coefficient		2.2	2.0	1.8	1.0	
Frequency (Hz)		50/60	120	300	1K	≥10K
Correction coefficient	16~100V.DC	0.7	1.0	1.1	1.2	1.2
	160~450V.DC	0.7	1.0	1.1	1.3	1.4

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz

NEW!

HUC Series Useful of 4,000 hours at 105°C

- Conform RoHS

Features

- Capacitance is approximately 30% higher than that of the conventional compact HU series, achieved through the use of a highly reliable electrolyte and a special high-capacitance anode foil.

HUC

Product Specifications

Items	Specifications
Temperature range	-25 ~ +105°C
Rated voltage	450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (μA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hour : Capacitance change : Within ±20% of the initial value measured Dissipation factor : 300% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	60	70	85	105	
Correction coefficient	1.8	1.6	1.3	1.0	
Frequency (Hz)	50/60	120	300	1K	≥10K
Correction coefficient	0.7	1.0	1.1	1.2	1.3

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

ALUMINUM ELECTROLYTIC CAPACITORS

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz

NEW!

ZLC Series

Useful of 5,000 hours at 105°C

- Conform RoHS

Features

- Capacitance is approximately 30% higher than that of the conventional compact ZL series, achieved through the use of a highly reliable electrolyte and a special high-capacitance anode foil.

ZL
P.104

→
Small-size

ZLC

Product Specifications

Items	Specifications
Temperature range	-25 ~ +105°C
Rated voltage	450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (μA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 3,000 hour : Capacitance change : Within ±20% of the initial value measured Dissipation factor : 300% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	60	70	85	105	
Correction coefficient	1.8	1.6	1.3	1.0	
Frequency (Hz)	50/60	120	300	1K	≥10K
Correction coefficient	0.7	1.0	1.1	1.2	1.3

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz.

SNAP MOUNT TYPE ALUMINUM ELECTROLYTIC CAPACITORS

UPGRADE!

HL Series Useful of 8,000 hours at 105°C

- Conform RoHS

Features

- The HL series is the miniaturization products of 8,000 hours.

Product Specifications

Items	Specifications
Temperature range	−40 ~ +105°C (200, 250V.DC) −25 ~ +105°C (315 ~ 500V.DC)
Rated voltage	200 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (μA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard products table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 5000 hours : Capacitance change : Within ±20% of the initial value measured Dissipation factor : 200% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

2-claw short terminal (Terminal code : C)

4-claw terminal (Terminal code : S)

* Products marked with “*” in the standard products table : $\phi D \pm 1.5$, $L \pm 2.5$
(For details of product specifications please request specification sheet.)

Ripple current correction coefficient

Temperature (°C)	60	70	85	105	
Correction coefficient	1.9	1.7	1.4	1.0	
Frequency (Hz)	50/60	120	300	1K	
Correction coefficient	0.7	1.0	1.1	1.3	
					1.4

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz.

YL Series Useful of 10,000 hours at 105°C

- Conform RoHS

Features

- The YL series is the miniaturization products of 10,000 hours.

Product Specifications

Items	Specifications
Temperature range	-25 ~ +105°C
Rated voltage	400 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (μA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 7,000 hours : Capacitance change : Within ±20% of the initial value measured Dissipation factor : 200% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	60	70	85	105	
Correction coefficient	1.9	1.7	1.4	1.0	
Frequency (Hz)	50/60	120	300	1K	≥10K
Correction coefficient	0.7	1.0	1.1	1.3	1.4

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Long-life

XL1

Product Specifications

Items	Specifications
Temperature range	−40 ~ +105°C
Rated voltage	200 ~ 450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (µA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 10,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 200% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	60	70	85	105	
Correction coefficient	2.2	2.0	1.8	1.0	
Frequency (Hz)	50/60	120	300	1K	
Correction coefficient	0.7	1.0	1.1	1.3	
					1.4

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)

Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz

SNAP MOUNT TYPE ALUMINUM ELECTROLYTIC CAPACITORS

UPGRADE!

CU Series

Useful of 4,000 hours at 105°C

- Conform RoHS

Features

- CU series has higher ripple current (ave 30%) compared with HU3 series. These features are accomplished by new heat radiation.
- The vent is located in the side of the case.

Items	Specifications
Temperature range	−25 ~ +105°C
Rated voltage	400 ~ 500V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (μA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hours : Capacitance change : Within ±20% of the initial value measured Dissipation factor : 200% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4
Notes to users	The vent position is not fixed. Please do not set up an obstacle to circumference less than 1mm.

Dimensions

2-claw short terminal (Terminal code : C)

(Unit : mm)

4-claw terminal (Terminal code : S)

(Unit : mm)

* Products marked with "*" in the standard products table : φ D ±1.5, L ±2.5 (For details of product specifications please request specification sheet.)

Ripple current correction coefficient

Temperature (°C)	60	70	85	105
Correction coefficient	1.9	1.7	1.4	1.0
Frequency (Hz)	120	300	1K	≥10K
Correction coefficient	1.0	1.1	1.3	1.4
Forced wind (m / s)	<0.5	0.5≤		
Correction coefficient	1.0	1.1		

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz

ZR2 Series Useful of 5,000 hours at 105°C

- Conform RoHS

Features

- ZR2 series has higher ripple current (ave 15%) compared with ZR series. These features are accomplished by new special anode foil and high reliability electrolyte.
- The vent is located in the side of the case.

HP3

P.86 High-ripple current

PS2

Features

- Higher ripple though use of low-ESR material consequently, the permissible ripple current is improved by 27% in the windless status or 40% in the ventilated condition (0.5m/s) as compared with conventional constructions (HP3 series).
- Improvement in air exhaust (flow hole phenomenon) from the terminal insertion hole at solder fixing though improvement of cap construction.
- The operating spase of the safety vent (arranged on the case bottom) is reduced from 5mm (conventional necessary distance) into 1mm through improvement of case construction. For these new case construction, pattern design can be move flexible.

Product Specifications

Items	Specifications
Temperature range	-40 ~ +85°C (200 ~ 500V.DC) -25 ~ +85°C (550, 600V.DC)
Rated voltage	200 ~ 600V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (µA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (85°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 85°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 85°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Ripple current correction coefficient

Temperature (°C)	40	60	85		
Correction coefficient	200~500V.DC	1.89	1.51	1.00	
	550~600V.DC	1.65	1.45	1.00	
Frequency (Hz)	50/60	120	300	1K	≥10K
Correction coefficient	0.7	1.0	1.1	1.3	1.4
Forced wind (m/s)	<0.5	0.5≤			
Correction coefficient	1.0	1.1			

Terminal permissible current is limited to 15Arms (φ41, 46), 20Arms (φ51).

(Even if calculated the permissible ripple current with the correction coefficient exceeds 15, 20 Arms)

Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating condition I versus rated ripple current at 85°C , 120Hz.

UPGRADE!

US2 Series

Useful of 4,000 hours at 105°C

• Conform RoHS

HU3
P.90 High-ripple current

US2

Features

- Higher ripple though use of low-ESR material consequently, the permissible ripple current is improved by 27% in the windless status or 40% in the ventilated condition (0.5m/s) as compared with conventional constructions (HU3 series).
- Improvement in air exhaust (flow hole phenomenon) from the terminal insertion hole at solder fixing though improvement of cap condtruction.
- The operating spase of the safety vent (arranged on the case bottom) is reduced from 5mm (conventional necessary distance) into 1mm through improvement of case construction. For these new case construction, pattern design can be move flexible.

Product Specifications

Items	Specifications
Temperature range	-40 ~ +105°C
Rated voltage	200 ~ 450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.01CV (µA) or 5mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hours : Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Ripple current correction coefficient

Temperature (°C)	40	60	85	105	
Correction coefficient	2.50	2.00	1.63	1.00	
Frequency (Hz)	50/60	120	300	1K	≥10K
Correction coefficient	0.7	1.0	1.1	1.3	1.4
Forced wind (m/s)	<0.5	0.5≤			
Correction coefficient	1.0	1.1			

Terminal permissible current is limited to 15Arms (φ41, 46), 20Arms (φ51).
(Even if calculated the permissible ripple current with the correction coefficient exceeds 15, 20Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature T_a and ripple current operating condition I versus rated ripple current at 105°C, 120Hz.

DH Series Useful of 5,000 hours at 105°C

- Conform RoHS

Features

- Suited to high frequency Charge-Discharge use for AC servomotor, general inverter.

Product Specifications

Items	Specifications
Temperature range	-25 ~ +105°C
Rated voltage	400, 450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	0.02CV (μA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 3,000 hours : Capacitance change : Within ±20% of the initial value measured Dissipation factor : 200% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 500 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±15% of the initial value measured Dissipation factor : 175% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Endurance of charge-discharge behavior	After an application of charge-discharge voltage for 200 million times (charge-discharge (ΔV) = 150V, cycle 6Hz) at 40°C, following requirements must be met. Capacitance change : Within ±20% of the initial value measured Dissipation factor : 200% or less than the initial value specified Leakage current : Less than or equal to the initial value specified
Others	JIS C 5101-4

Dimensions

Ripple current correction coefficient

Temperature (°C)	60	70	85	105	
Correction coefficient	1.9	1.7	1.4	1.0	
Frequency (Hz)	50/60	120	300	1K	≥10K
Correction coefficient	0.7	1.0	1.1	1.3	1.4

Terminal permissible current is limited to 10Arms. (Even if calculated the permissible ripple current with the correction coefficient exceeds 10Arms)
Please consult us when the ripple voltage exceeds 70Vp-p.

Life time graph

Useful life depending on ambient temperature Ta and ripple current operating conditions I versus rated ripple current at 105°C, 120Hz

HW Series

- Conform RoHS

Features

- Best fit for applications requiring fast energy discharge like aesthetic equipment, medical laser, portable X-ray generator, and photo flash.

Product Specifications

Items	Specifications			
Temperature range	-20 ~ +55°C			
Rated voltage	330WV.DC	360WV.DC	400WV.DC	450WV.DC
Withstanding voltage	350SV.DC	380SV.DC	420SV.DC	470SV.DC
Capacitance tolerance	-10 ~ +20% (20°C, 120Hz)			
Leakage current	C ≤ 3,000 : 0.02CV (µA) or 3mA, whichever is smaller or less (20°C, after 5 minutes) C > 3,000 : 1×C (µA) (20°C, after 5 minutes) [C = nominal capacitance (µF), V = rated voltage (V)]			
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)			
Endurance of charge-discharge behavior	A resistance of about 1 ohm is connected in series with the capacitor under normal ambient temperature. Then the capacitor is charged / discharged at rated voltage for 5,000 times at intervals of 15 seconds. A lapse of 8 hours after the test, the capacitor shall satisfy the following characteristics. Capacitance change : Within ±15% of the initial value measured Dissipation factor : Not more than 150% of initial value specified Leakage current : Not more than 150% of initial value specified			
Others	EIAJ-RC2365, JIS C 5101-4

Product Specifications

Items	Specifications
Temperature range	−25 ~ +105°C
Rated voltage	200 ~ 450V.DC
Capacitance tolerance	±20% (20°C, 120Hz)
Leakage current	Not more than 0.04CV + 100 (μA) (20°C, after 2 minutes) [C = nominal capacitance (μF), V = rated voltage (V)]
Dissipation factor	Less than the value specified in the standard products table. (20°C, 120Hz)
Permissible ripple current	As specified in the standard product table. (105°C, 120Hz)
Endurance	After the rated voltage with specified ripple current is applied at 105°C for 2,000 hours : Capacitance change : Within ±20% of the initial value measured. Dissipation factor : 200% or less than the initial value specified. Leakage current : Less than or equal to the initial value specified.
Shelf life	The following specification shall be meet when the capacitor are restored to 20°C after storage of 1,000 hours at 105°C with no voltage applied. Before the measurement, the capacitor shall be preconditioned by applying the voltage treatment according to Item 4.1 of JIS C 5101-4. Capacitance change : Within ±20% of the initial value measured. Dissipation factor : 200% or less than the initial value specified. Leakage current : 200% or less than the initial value specified.
Others	JIS C 5101-4

Table of plastic film capacitor types

Series	Features	Operating temperature range	Standard product	Small-sized product	High-reliability product	Rated voltage V	Capacitance range μF	Page
MLC	Standard, For DC, Aluminium encased type	$-40 \sim +85^{\circ}\text{C}$	○		○	900~1,500	70~2,300	156
MLC2	Large capacitance, For DC, Aluminium encased type	$-40 \sim +85^{\circ}\text{C}$		○	○	800, 900	230~3,800	162
MLCA UPGRADE!	High-ripple current, For DC, Aluminum encased type	$-40 \sim +85^{\circ}\text{C}$			○	500~2,200	90~5,000	166
MKCP4	Standard, For DC, Resin encased type	$-40 \sim +85^{\circ}\text{C}$ (105°C)	○	○	○	700~1,100	7~100	170
MKCP4T	Humidity resistance, For DC, Resin encased type	$-40 \sim +85^{\circ}\text{C}$ (105°C)	○	○	○	700~1,100	6~70	172
MKCA UPGRADE!	Wide voltage, Humidity resistance, DC, Resin type	$-40 \sim +85^{\circ}\text{C}$ (105°C)	○	○	○	450~1,200	1~80	174

1. Environment

- (1) Adhesion of water, salt water, oil, and other conductive liquid may cause capacitor failure.
Don't use capacitors wetted with liquid.
- (2) Don't store or use capacitors in corrosive atmospheres, especially in environments containing chlorides, sulfides, acids, alkalis, salts, organic solvents, or similar substances.
- (3) Don't use capacitors in ozone or under ultra violet radiation or radio active rays.
- (4) Accumulated dusts between capacitor terminals may absorb moisture and cause rust of terminals and / or tracking phenomenon. When such accumulation is visible, discharge the capacitor completely and clean the accumulated dusts with a paper or towel slightly dampened with ethanol. Don't use other cleaning agents.
- (5) Excessive vibration and/or shock may cause capacitor failure.

2. Mounting Location

2-1. Precaution

- (1) Don't use damaged capacitors even if the capacitors show normal electrical characteristics and no visible damage.
- (2) Secure sufficient space around capacitors not to add excessive physical stress on capacitor terminals.
- (3) Do not place capacitors directly above or next to heat sources such as detuning, tuning reactors, or bus bars.
- (4) Secure sufficient creepage distance and air clearance around capacitors.

2-2. Mounting

- (1) Keep the torque described in catalog or data sheet. Toothed washer has to be used for fixing stud bolt.
- (2) Stud bolt

Series	Stud bolt	Torque
MLC/MLC2/MLCA	M12	7 ± 1Nm

- (3) Improper connection may cause critical capacitor failure such as rupture and ignition. Don't apply excessive stress to terminals and stud bolt.
- (4) The useful life of a capacitor may be reduced dramatically if exposed to excessive heat.
- (5) Operation outside the scope of capacitor's permitted operating condition leads to life time reduction and / or capacitor failure.
- (6) Make sure that the hotspot temperature of a capacitor under the most severe operating condition is equal to or under the capacitor's maximum operating temperature. Capacitors with thermo sensor are available depending on user's request. Operation under current over specified value in data sheet could be permissible if the capacitor is operated under forced cooling. Please contact us if bus bars have high temperature and / or capacitors are placed with narrow space between them. They may cause increase of capacitor's hotspot temperature.
- (7) It should be noted that the internal heat balance of large capacitors is only reached after a couple of hours when verifying inner temperature rise of capacitors.

3. Humidity

Capacitors may not be stored or operated outside the specified humidity ranges.

MLC/MLC2/MLCA series

max. relative humidity	: 75% annual means
	: 95% 30 days/year
condensation	: not permitted

PLASTIC FILM CAPACITORS

4. Use condition

4-1. Ambient temperature / Current

- (1) Capacitors must be operated according to the specification in catalog and / or data sheets.
- (2) Overvoltage or thermal overload may cause rupture, ignition, and internal faults. When the highest temperature in capacitor is higher than 70°C, voltage derating has to be applied. For MLC and MLC2 series, permissible ripple current can be calculated from ambient temperature, operating voltage and information in data sheet or catalog.
Even if operating current is lower than permissible value, the current over permissible terminal current may cause excessive terminal heat generation.
- (3) Ambient temperature is measured at a point approximately 0.1m away from the capacitor housing and at two-third of the height from its base.
- (4) It has to be noted that capacitors themselves generate heat.
- (5) Permissible current decrease with the increase of ambient temperature. Therefore, It should be considered that capacitors must be selected by considering the operation at maximum ambient temperature.
- (6) Frequency may affect electric load. Capacitors have to be selected by considering the effect of frequency.
- (7) It should be noted that resonance by inductance of external circuit may affect capacitor's performance.
- (8) It should be noted that parallel connection may cause current unbalance because of the difference of circuit impedance.

4-2. Cooling

- (1) Give at least 40mm for MLC and MLC2 series between capacitors for natural or forced cooling.

4-3. Voltage / Other use condition

- (1) Dielectric breakdown may cause severe internal fault such as short circuit, ignition and rupture.
Capacitors must be operated inside the specified range specified in catalog and/or data sheets.
For overvoltage within short period may not shorten service life time of capacitors.
- (2) Capacitors must be operated under rated voltage. Surge voltage specified in data sheet is just for capacitor evaluation, and does not guarantee the continuous operation of capacitors.
- (3) Inrush current may cause internal faults.
- (4) Film capacitors have finite service life.
- (5) DC capacitors must not be operated under AC condition. When ripple voltage over 20% of rated voltage is applied to DC capacitors, it may cause capacitor failure. In this case, please contact us.

5. Vibration / Shock

- (1) Vibration and shock mainly affect fixing materials and terminals. It is important to measure the degree of vibration and shock at mounting location.
- (2) The capacitors comply with test standard (IEC60068-2-6) as follows.

series	capacitor weight	test duration	frequency range	max. acceleration	max. displacement amplitude
MLC, MLC2, MLC4 MKCP4, MKCP4T, MKCA	< 3kg	10 cycles per each axes	10 to 55Hz	50m/s ²	±0.35mm
	3kg ≤	information available on request			

6. Safety of self-healing type film capacitors

In the event of a voltage breakdown the metal layers around the breakdown channel are evaporated by the temperature of the electric arc that forms between the electrodes. An insulation area is formed which is reliably resistive and voltage proof for all operating requirements of the capacitor. The capacitor remains fully functional during and after the breakdown.

Surge voltages and surge currents within rated values induced by switching or faults of the system or any part of it are also permitted.

7. Mind hazards of explosion and fire

- (1) Capacitors consist mainly of polypropylene, i.e. their energy content is relatively high. They may rupture and ignite as a result of internal faults or external overload (e.g. temperature, overvoltage, harmonic distortion) .
- (2) It must therefore be ensured, by appropriate measures, that they do not form any hazard to their environment in the event of failure or malfunction of the safety device.

8. Discharge

In any event, the poles of the capacitors must be discharged with 1kOhm or larger resistance before being touched. Note that capacitors with nominal voltages above or 2,000V.DC in particular may regenerate new voltage at their terminals after having been short-circuited just for short periods. This condition will be avoided by storing them permanently short circuited.

9. Earthing

Capacitors with a metal case must be earthed at the metal part or by means of a separate metal strap or clamp.

10. Environmental Compatibility

- (1) Our capacitors do not contain PCB, solvents or any other toxic or banned materials.
- (2) Our capacitors comply with RoHS directive.

11. Storage

Storage environment: -40°C to $+35^{\circ}\text{C}$, max. RH75%, indoor without direct sunlight and condensation

Shelf life: 3 years without any verifications (2 years for lead-wire terminals)

If the storage time exceeds the above term, please confirm before usage that electric characteristics meets specifications, capacitor case is not covered with stains, and terminals are not covered with oxide layer.

12. Fumigation treatment

Fumigation treatment may be performed during transportation for insect proofing.

Halide such as methyl bromide may cause corrosion inside capacitors, and lead to failure.

Insecticide also may cause capacitor failure.

13. Disposal

- (1) We recommend disposing of the capacitors through professional recycling centers for electric / electronic waste.
- (2) After incineration of capacitors, metal parts such as terminal, aluminum case, lid and internal wirings will be remained.
- (3) Please consider that disposed capacitors should not put on the market.

14. Others

- (1) In case of fire, dried powder, carbon dioxide or foam fire extinguishing agent has to be used.
- (2) Please comply with transportation and exporting regulation in each nation.
- (3) Capacitors usually have design life of approx. 15 to 20 years under proper operating condition. In order to maintain the reliability of equipment, it is recommend to replace the capacitors after ten years operation.

15. Important notice before use

AIC tech does not accept responsibility for whatever damage may arise out of a non-observance, or caused by capacitors without agreement on detail of use condition, evaluation condition etc.

Service life of plastic film capacitor for power electronics

16. Formula for estimating service life (MLC, MLC2)

- (1) Estimating from the core temperature of the capacitor and applied voltage Formula for calculating the service life of our capacitors in mid-to-high voltage applications (filters).

$$L = L_0 \times 2^{\frac{T_0 - T}{A}} \times \left(\frac{V_0}{V} \right)^N$$

Where,

To : Maximum core temperature setting when subjected to the maximum allowable ripple load at the maximum operating temperature

Lo : Standard service life when core temperature is T_0 and base voltage is (V_0)

L : Estimated service life when core temperature is T and applied voltage is (V)

A, N : Acceleration coefficients (contact us for details)

- (2) Estimating core temperature of a capacitor from load ripple current

We recommend that you estimate service life by measuring the core temperature of the capacitor with a thermocouple. We can manufacture samples with inserted thermocouples according to customer requests.

If for some reason it is impossible to measure the core temperature, you can estimate the service life by making a rough estimate of the core temperature of the capacitor from the load ripple current. As shown below, assuming the rise in temperature and the square of load current to be nearly proportionate, obtain the core temperature of the capacitor that occurs when the capacitor is loaded with a ripple current.

$$T = T_a + I^2 \cdot ESR \cdot R_{th}$$

Where,

T : Core temperature of the capacitor when ripple current I is loaded (°C)

Ta : Ambient temperature (°C)

I : Ripple current (Arms)

ESR : Equivalent series resistance of capacitor (Ω)

Rth : Thermal resistance (K/W)

※ Ripple current (I) is limited by maximum current (Imax) specified for each capacitor.

Glossary

Rated capacitance C_N

Capacitance value rated at 20°C / rated frequency.

Rated Voltage U_N

The maximum or peak voltage of either polarity of a reversing or nonreversing type wave form for which the capacitor has been designed and rated (unlike other standards for AC capacitors, the rated voltage is not the rms value).

Non repetitive peak (surge) voltage U_S

Voltages beyond the rated voltage induced by switching or faults of the system or any part of it. Maximum count 1000 times with a duration of not more than 50 ms each.

rms voltage U_{rms}

Root mean square of the max. permissible value of sinusoidal AC voltage in continuous operation.

Ripple voltage U_r

The peak-to-peak alternating component of the unidirectional voltage.

Voltage test between terminals U_{TT}

Routine test of all capacitors conducted at room temperature, prior to delivery.

A further test with 80% of the test voltage stated in the data sheet may be carried out once at the user's location.

Voltage test between terminals and case U_{TC}

Routine test of all capacitors between short-circuited terminals and case, conducted at room temperature. May be repeated at the user's location.

Maximum current I_{max}

Maximum rms value of permissible current in continuous operation. The values given in the data sheets are related to either the specified maximum power dissipation or the current limits of the connection terminals.

Peak current $\hat{I}$

Maximum permitted repetitive current amplitude during continuous operation.

Non-repetitive peak current (surge) I_S

Maximum current that may occur non-repetitively and briefly in the event of a fault.

Maximum count 1000 times with a duration of not more than 50 ms each.

Equivalent series resistance R_S

Equivalent resistance representing the sum of all Ohmic resistances occurring inside the capacitor. Essential for calculation of the current dependent losses.

Self-inductance L_e

Represents the sum of all inductive elements which are – for mechanical and construction reasons – contained in any capacitor.

Resonant frequency f_{res}

The capacitance and self-inductance of any capacitor form a series resonant circuit.

Above the resonant frequency, the inductive part of this LC-circuit prevails.

The capacitor would then behave as an inductor.

Dielectric dissipation factor $\tan \delta_0$

Constant dissipation factor of the dielectric material for all capacitors in their rated frequency.

Thermal resistance R_{th}

The thermal resistance indicates by how many degrees the capacitor temperature at the hotspot rises in relation to the dissipation losses.

Maximum power dissipation P_{max}

Maximum permitted power dissipation for the capacitor's operation at a certain ambient temperature.

Ambient temperature θ_U

Temperature of the surrounding air, measured 10 cm away and at 2/3 of the case height of the capacitor.

Lower category temperature θ_{min}

Lowest permissible ambient temperature at which a capacitor may be used.

Upper category temperature θ_{max}

Highest permissible capacitor temperature during operation, i.e. temperature at the hottest point of the case.

Hotspot temperature $\theta_{HOTSPOT}$

Temperature at the hottest spot inside the capacitor.

Rated energy contents E_N

Energy stored in the capacitor when charged at rated voltage.

Clearance in air L

The shortest distance between conducting parts of the terminals or between terminals and case.

Creepage distance K

The shortest distance along an insulated surface between conducting parts of the terminals or between terminals and case.

MLC Series (Cylindrically-Shaped Metallized Polypropylene Film Capacitors)

Features

- Cylindrically-shaped capacitor with big capacitance for wind & solar power inverters, other inverters, chopper control and charge-discharge.
- High reliability of withstanding voltage due to using of our original segmented metallized film.
- UL 810 standard option compliant. (Series : MLCU)

Specifications

Items	Characteristics
Operating Temperature range *	-40 ~ +85°C at 0.7 U_N
	-40 ~ +80°C at 0.8 U_N
	-40 ~ +75°C at 0.9 U_N
	-40 ~ +70°C at 1.0 U_N
Rated Voltage U_N	900 ~ 1,500V.DC
Voltage test between terminals U_{TT}	$1.5 \times U_N / 10s$
Voltage test terminals to case U_{TC}	3,200V.AC / 10s
Terminals (permitted Torque)	M6 × 10 (4 ± 0.5Nm)
Stud Bolt (permitted Torque)	M12 × 16 / 18 (7 ± 1Nm)

- * • Please inquire us in case low frequency (commercial frequency) or frequency above 10kHz is included in ripple current.
 • Maximum permissible ripple current is calculated by the value in this table with frequency and temperature correction factors.
 Also the maximum current must be controlled below the permissible terminal current .
 Please refer useful life graph based on ambient temperature and voltage.

$$\theta_{HOTSPOT} = T_a + I^2 \times ESR \times R_{th}$$

Standard Products Table

Rated d.c voltage U_N : 1,100V.DC		Max.ripple voltage U_r : 250V Non repetitive surge voltage U_s : 1,650V Voltage test between terminals U_{TT} : 1,650V.DC/10s Voltage test terminals to case. U_{TC} : 3,200V.AC/10s

- * • Please inquire us in case low frequency (commercial frequency) or frequency above 10kHz is included in ripple current.
 • Maximum permissible ripple current is calculated by the value in this table with frequency and temperature correction factors.
 Also the maximum current must be controlled below the permissible terminal current .
 Please refer useful life graph based on ambient temperature and voltage.

$$\theta_{HOTSPOT} = T_a + I^2 \times ESR \times R_{th}$$

MLC2 Series

(Cylindrically-Shaped Metallized Polypropylene Film Capacitors)

Features

- Approx. 15% smaller than MLC series in volume.
- Cylindrically-shaped capacitor with big capacitance for wind & solar power inverters, other inverters, chopper control and charge-discharge.
- High reliability of withstanding voltage due to using of our original segmented metallized film.

Specifications

Items	Characteristics
Operating Temperature range *	-40 ~ +85°C at 0.7 U_N
	-40 ~ +80°C at 0.8 U_N
	-40 ~ +75°C at 0.9 U_N
	-40 ~ +70°C at 1.0 U_N
Rated Voltage U_N	800, 900V.DC
Voltage test between terminals U_{TT}	$1.5 \times U_N / 10s$
Voltage test terminals to case U_{TC}	3,200V.AC / 10s
Terminals (permitted Torque)	M6 × 10 (4 ± 0.5Nm)
Stud Bolt (permitted Torque)	M12 × 16 / 18 (7 ± 1Nm)
Reference / Standard	IEC 61071 : 2007
Dielectric	Polypropylene
Safety Function	Segmented Metal with Fuse Function
Cap	PBT UL94V-0 listed
impregnants	Epoxy / Urethane Resin UL94V-0 listed
Case material	Aluminium
Humidity	ClassF : 75% annual average, 95% 30days / year

- * • Please inquire us in case low frequency (commercial frequency) or frequency above 10kHz is included in ripple current.
 • Maximum permissible ripple current is calculated by the value in this table with frequency and temperature correction factors.
 Also the maximum current must be controlled below the permissible terminal current .
 Please refer useful life graph based on ambient temperature and voltage.

$$\theta_{HOTSPOT} = T_a + I^2 \times ESR \times R_{th}$$

UPGRADE!

MLCA Series (Cylindrically-Shaped Metallized Polypropylene Film Capacitors)

Features

- Large DC film capacitor with high voltage / high ripple current
- Suitable for applications that require high voltage and high current, such as large inverters / power supplies.

Specifications

Items	Characteristics
Operating Temperature range	-40 ~ +85°C
Rated Voltage U_N	500 ~ 2,200V.DC
Voltage test between terminals U_{TT}	$1.5 \times U_N / 10s$
Voltage test terminals to case U_{TC}	$\geq 4,000V.AC / 10s$
Terminals (permitted Torque)	M6 $\times$ 10 (Max. 5Nm)
Stud Bolt (permitted Torque)	M12 $\times$ 16 (Max. 12Nm)
Standard	IEC 61071 : 2017, UL810 (File No E474687)
Dielectric	Polypropylene
Electrode	no internal safety device
Case material	Aluminium
Environmental regulations	Comply with RoHS

Dimensions

ϕD	L_1	Style code	P	ϕd_T	L_2	L_C
$\phi 76$	—	B	32	$\phi 12$	$L_1 + 5$	32

MKCP4 Series

(Resin-encased Metallized Polypropylene film capacitors)

Features

- Suitable for DC link circuit.
- Plastic case and filling resin materials conform to UL94V-0.

Specifications

Items	Description
Operating Temperature range *	− 40 ~ + 105°C (voltage derating is required at ≥ + 85°C)
Rated Voltage U_N	700 ~ 1,100V.DC
Voltage test between terminals	$1.5 \times U_N / 10s$
Terminals	Tinned wire leads
Reference standard	IEC 61071 : 2007
Dielectric	Polypropylene
Case	UL94V-0
Filling material	UL94V-0
Environmental regulation	Comply with RoHS

* Temperature in table is value at hot spot on capacitor case.

Dimension

Case (mm)			Terminal (mm)			Case dimension code

MKCP4T Series

(Resin-encased Metallized Polypropylene film capacitors)

Features

- Suitable for a DC link circuit in the high humidity environment.
- 85°C, 85%RH, 1kh.
- Plastic case and filling resin materials conform to UL94V-0.

Specifications

Items	Description
Operating Temperature range *	- 40 ~ + 105°C (voltage derating is required at ≥ + 85°C)
Rated Voltage U_N	700 ~ 1,100V.DC
Voltage test between terminals	$1.5 \times U_N / 10s$
Terminals	Tinned wire leads
Reference standard	IEC 61071 : 2007
Dielectric	Polypropylene
Case	UL94V-0
Filling material	UL94V-0
Environmental regulation	Comply with RoHS

* Temperature in table is value at hot spot on capacitor case.

UPGRADE!

MKCA Series

(Resin-encased Metallized Polypropylene film capacitors)

Features

- Suitable for DC link circuit
- Wide range of rated voltages (450 ~ 1,200V.DC)
- THB 85°C 85% RH at U_N for 1,000 hours

Specifications

Items	Description
Operating Temperature range *	- 40 ~ + 105°C (85 ~ 105°C : decreasing factor 1.4% per °C for U_N)
Rated Voltage U_N	450 ~ 1,200V.DC at 85°C
Voltage test between terminals	$1.5 \times U_N / 10s$
Terminals	Tinned wire leads
Reference standard	IEC 61071 : 2017, UL810 (File No E474687)
Dielectric	Polypropylene
THB Ratings	85°C 85% RH, 1,000h at U_N
Case	UL94V-0
Filling material	UL94V-0
Environmental regulation	Comply with RoHS

* Temperature at the capacitor's hottest spot (includes self-heating).

**ATTENTION**

- The description in this catalog is as of Nov. 2025 and is subject to change without prior notice for product improvement. Therefore, please confirm the specification before ordering products.
- The general characteristics, reliability data, etc., described in this catalog should not be construed as guaranteed values; they are merely standard values.
- The capacitors in this catalog are for use in ordinary equipment other than medical and disaster-preventing equipment. When you use the products for medical and disaster-preventing equipment which requires higher reliability, please ask us in advance.
- Before using the products, please read the notes in this catalog carefully for proper use,
